

a The historical table, row by row

b Internal consistency

c Preserved artifact inventory: arithmetic is reproducible; execution is not

PRESENT	Historical paper and result table	Supports a document-level arithmetic and provenance audit.
MISSING	Executable COBOL and Java subjects	The reported executions cannot be rerun.
MISSING	Input fixtures and expected outputs	Case construction and intended behavior cannot be inspected.
MISSING	Raw stdout, files, and state traces	Pass/Fail statuses and failure diagnoses cannot be independently verified.
MISSING	Comparator and normalization policy	The decision rule that produced each status is unknown.
MISSING	Compiler, runtime, and container manifest	The execution environment cannot be reproduced.
MISSING	Independent or blinded labels	The table is not an independent accuracy benchmark.
MISSING	Timing and resource measurements	No performance or scalability conclusion is supported.
